Ahista ahista full movie

Warner Bros., what are you? In the 1960s, there was an era of cultural change, and the films of the era had significant implications for global culture. Established directors such as Hitchcock and Billy Wilder released some of their best works, while new filmmakers such as Stanley Kubrick began building their careers throughout the decade. In addition, independent cinema began to make big inroads into the mainstream. The following list consists of the most important films (though not necessarily the best) released in the 1960s. The films are listed chronologically by release date. After releasing the successful classic films in the 1950s, filmmaker Billy Wilder began the 1960s with another groundbreaking comedy: *The Apartment*. Jack Lemmon plays C.C. Baxter, an employee of a large company that allows his bosses to use their apartment for extramarital affairs. Baxter falls for the elevator operator (Shirley MacLaine), but finds out he's the object of one of his bosses' affection. The comedy deals directly with infidelity, which had previously been taboo in Hollywood. *The Apartment* won five Oscars, including Best Picture. Wilder, Lemmon and MacLaine later merged in 1964's *Irma la Douce*. Paramount Pictures Alfred Hitchcock was one of the biggest star directors during this time. With *Psycho*, Hitchcock reduced his usual big budgets and decided instead to make a small-scale black-and-white movie. A psycho tells of a murder in a small-town motel and shocking discoveries stemming from an investigation. *Psycho* and its famous shower scene would inspire the style and tone of the slasher movie genre with a mixture of violence, disturbing behavior and sexuality. *West Side Story* sent Shakespeare's Romeo and Juliet to modern New York. Critics viewed the film version as one of the best film versions in a Broadway musical. It explored the racial dynamics of American cities and depicted a white gang and a Puerto Rican gang facing a blood dispute. *West Side Story* was a box office hit and won 10 Oscars. The songs – especially *Somewhere (There's a Place for Us)*, *America* and *Tonight* – are among the most popular in American musical theatre and film history. Bond, what are you? James Bond, British super spy James Bond, one of the most iconic movie heroes, made his first film appearance in 1962 as Dr. No. Sean Connery plays Bond and takes down the villainous character Joseph Wiseman) while romanticizing Honey Ryder (Ursula Andress). Dr. No was a big hit that inspired a long-running franchise. Even better Bond movies came later in the 1960s – such as *Honda Russ with Love* (1963) and *Goldfinger* (1964). Dr. No is the success story that started it all. More than 55 years and 24 sequels later, Bond continues to thrive on the big screen. The 1960s marked a significant decade for international cinema, and many particular journeys. During the Era of an Iron Curtain, director Federico Fellini's *La Strada* (1954) was interpreted as a寓言 of a filmmaker's creation block and mid-life crisis, and the emotional journey of a female slave who inspired many others, including Woody Allen and Terry Gilliam, and was adapted into a musical called *Nine* in 2009 and won the Academy Award for Best Foreign Language Film. Italian Pictures considered by many to be one of the greatest blockbusters of all time, *One Flew Over the Cuckoo's Nest*, based on Ken Kesey's novel, was released in 1975. The film, directed by Peter Fonda and starring Jack Palance and Louise Fletcher, is based on America's love for rebellion, revolution, Stanley Kubrick's *Dr Strangelove or: How I Learned to Stop Worrying and Love the Bomb* (1964) based on Peter George's satirical novel, *Red Alert*, but the film evolved into a comedy during the script process. Peter Sellers has three roles, including the PRESIDENT of the United States, who faces a crisis when an Air Force general launches a nuclear attack on the Soviet Union. Sellers also plays the title character, an eccentric scientist. Government inaction and international politics remain a popular theme. After traveling the world by storm in their music, the Beatles made their first film, *A Hard Day's Night*, in 1964. The Fab Four showed remarkable comedy talent in the film, which was tremendously successful and influential. *A Hard Day's Night* demonstrated the cultural power of rock and roll that would only grow towards the end of the decade. It also served as inspiration for upcoming music videos. Few films have been as influential as *The Good, The Bad and The Ugly*, one of the greatest westerns of all time. Italian filmmaker Sergio Leone transformed the often scorned Spaghetti Western (low-budget Westerns made in Italy) into high art with his Dollars trilogy, a trio of acclaimed Westerners starring American actor Clint Eastwood. In *The Good, Evil and Ugly*, Eastwood plays one of three men seeking buried Confederate gold in an escalating battle of wit. The film is known for its wonderful film and the beloved music of Ennio Morricone. Bonnie and Clyde, whose title characters include Faye Dunaway and Warren Beatty, were the first films to enchant criminals since the 1930s. Warner Brothers was concerned that these creative choices would sink the film, but Bonnie and Clyde eventually became a huge hit. The filmmakers followed the description of Bonnie and Clyde's violence. The film is considered a precursor to the New Hollywood era of the 1970s. In *The Heat of the Night* was one of the first Hollywood films to have an African-American lead role as a hero. Sidney Poitier plays Virgil Tibbs, a Philadelphia detective who is arrested in Mississippi on suspicion of murder and ends up working on the case. The film exploring racial issues was well-received and won five Oscars, including Best Picture. Two sequels starring Poitier followed suit. Comedian Mel Brooks made his directorial debut with *The Producers*, a comedy film-washed Broadway producer (Zero Mostel) and an accountant (Gene Wilder) who create a plan to make money with a musical that's sure to close. The terrible result, a terrible musical called *Springtime for Hitler*, is one of the most memorable moments in Hollywood history. Nearly 35 years after the film's release, Brooks co-wrote a musical adaptation of *The Producers*, which had great success. Science fiction classic *Planet of the Apes* depicts an astronaut (Charlton Heston) crashing into a planet dominated by advanced monkeys enslaving humans. The arrival of the astronaut threatens to lead to a monkey society. *Planet of the Apes* received great praise for its makeup effects, social commentary and, above all, its shocking spiral. It was followed by four sequels, a TV series and a comic book series. More *Planet of the Apes* films followed in the 21st century. Four years after *Dr Strangelove*, filmmaker Stanley Kubrick returned with an equally ambitious 2001: *A Space Odyssey*. Segments of the film traced human history from the opening of the Dawn of Man series to the upcoming 2001. The episodic narrative leaves much of the film open to interpretation. 2001 won the Best Visual Effects Oscar and is considered a landmark film in the field of special effects. Today's zombie movies and TV shows all come from perhaps the greatest horror movie of all time: *Night of the Living Dead*. This independently made horror feature has inspired countless horror film makers, and its realistically gory images created controversy with the audience. Director George A. Romero noted that he played Duane Jones, an African-American actor, in the lead role simply because he had the best audition. However, critics suggested that casting was a sign that the film was a metaphor for racism and the civil rights movement. Regardless of the original purpose, *Night of the Living Dead* is now considered a game-changing film. Romero directed five sequels from 1978 to 2009. There have been countless imitators involved, including the popular TV series *The Walking Dead*. *Easy Rider* showed a new kind of realism in filmmaking. In this low-budget road movie, Dennis Hopper and Peter Fonda play a couple of drug-trafficking bikers traveling all over the United States. After a reception at the 1969 Cannes Film Festival, *Easy Rider* became a major hit in the United States. The soundtrack to *Steppenwolf*, The Band and Jimi Hendrix was equally popular. *Easy Rider* marked a step towards filmmaking and the New Hollywood age of the 1970s.
